Optimization and simplification of
production processes
and workflows

Lean production

Optimization and simplification of production processes and workflows

In the majority of cases, it is the machines and systems that are the focus of optimization measures in manufacturing companies. Processes and workflows are often overlooked. However, these often offer the greatest potential for optimization. Our "Lean production" consulting service is designed to simplify your processes and workflows through targeted measures so that you can produce in a resource-saving and efficient manner. Together, we select the appropriate principles and instruments. Our extensive portfolio includes tools such as CIP, kanban, just-in-time, 5S and one-piece-flow. The

2 DAYS PREPARATION & FOLLOW-UP (OFFICE)
4 DAYS ON SITE,
DIRECT IMPLEMENTATION OF IMPROVEMENTS

Scope of Lean Production Projekts

Day 1

- Get to know your production
- Uncover potential for optimization

Day 2-4

- Reduction in non-value-adding and redundant activities
- Support in setting up the lean organization
- Multi-stage training of all employees in the tools and principles of lean production
- Final discussion

SCOPE OF SERVICES

The SCHULER project "Lean production" is executed according to the steps described. All travel and accommodation costs within Germany are included. On request, the recommended improvements can be implemented together with our support (follow-up project). If you would like a different project process or if you already have specific ideas, we will be happy to prepare an individual offer with an estimate of the effort involved (invoicing based on effort).

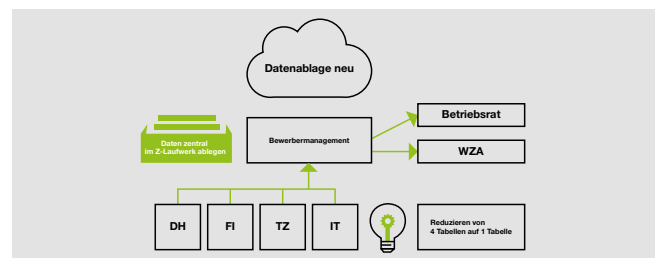

Before/after: Thanks to the reorganization, you no longer have to waste time searching for tools – everything is available directly! The workstations should be adapted ergonomically and individually for the activities performed. Methods such as kanban and the principle of easy accessibility help to achieve this goal.

sustainable introduction of the instruments is very important to us. That is why we train your company's management and employees in multi-stage workshops, thereby ensuring optimal integration. "Lean production" is used, among other things, in the machine-related environment, at work and assembly stations, in work preparation and administration as well as at the interfaces between internal company units.

THE BENEFITS

Measurable increase in productivity

- Professional moderation and support throughout the entire optimization process
- Motivated employees who enjoy their jobs and processes
- Increased acceptance of change processes through collaboration with all employees
- Short realization times, direct implementation and immediate resource savings
- Cost savings in production

By analyzing production processes and documents, you can eliminate redundant processes and simplify existing ones.
